(54) Title: METHOD AND SYSTEM FOR CONTROLLING THE DEVELOPMENT OF BIOLOGICAL ENTITIES

(57) Abstract: A method and system are presented for use in controlling the processing of components, e.g. biological entities. Each component is assigned with a unique machine readable identification mark. Data records are provided representative of matching sets of the identification marks relating to at least two associated components. Each component-containing holder may be provided with the unique machine readable identification mark assigned to the biological entity in the holder. This enables to identify whether the biological entities to be processed relate to the matching set or not.
